🕒 **Monday – Friday 9:00am – 5:00pm**

📍 **321 IR #10 Road Mount Currie**

☎ **(604) 894 – 0209**

What is Naloxone?

Naloxone is substance that temporarily reverses (antidote) the effect of opioids in the Central Nervous System (CNS).

Naloxone restores breathing that is slowed or stopped by opioids (e.g., dilaudid, morphine, heroin, methadone, fentanyl, etc.)

Naloxone temporarily reverses the effect of opioids and restores breathing; this prevents longer-term brain injury and death.

Naloxone is available in BC without a prescription. The BC Take Home Naloxone program provides kits with 3 doses of injectable naloxone.
